Hidden Disk is an easy to use drive caddy that will let you create your own hidden drive without the need for a tool. You can encrypt it with a password if desired. Once the drive is created it can be mounted at any point and it will show up in the Start menu as an extra drive. The drive is placed under your Startup disk so it will restart the computer like any other mounted drive. The data is encrypted on the drive so it cannot be deleted accidentally or removed. The data on the drive is deleted on any shutdown as normal. How to operate Hidden Disk: 1. Open the control panel and then open Start Menu. 2. Right-click the empty space (don't have anything running) and choose "Create new drive". 3. After the drive is created it will appear on your Windows desktop as an icon. 4. Right-click the drive to mount it as drive for the computer or execute "hidden disk drive.exe" as the caddy would if it was mounted. 5. Enter a password if desired or click the "Create without password" to encrypt the drive 6. The drive is mounted on the desktop and will restart the computer. 7. To remove the drive right-click and click "unmount". The file is simple but very easy to use and understand. It was created with the intention to be used with minimal to no experience with computers and provides a straightforward way to secure your files. Comments 1 Anonymous I'm not sure if I want to give it a rating but I just would like to say that I have been looking for a tool like this one for a while and this one does the job just like the others I have tried. I did find one other program that can also do this and is actually quite excellent and fast and easy to use. It's called "Simply Disk Unclutter" and it's got many other features as well but the one I like the best is the capability to encrypt the drive with a password so that the data cannot be read or removed. It's called and if you check it out you will see that
